RetailEdge 2024.07.2 Release Notes

Release Notes / Updates · https://retailedge.com/docs/retailedge-2024-07-2-release-notes

Published August 6, 2024

This is a minor release that adds a new discount rule and fixes some issues related to RetailEdge version 2024.7.0.

New Features

1. Added new discount Rule- Complete Sale – Adjustment (%) w/Coupon. This allows you to add a coupon to the sale screen as a percentage of the sale price. The adjustment can be negative or positive, to allow for things like Cash Discounting or adding Labor Cost surcharges to a sale. **Note**: You should check with your state to see what surcharging is allowed.

Fixes and Improvements

1. Changed the Table Resync Utility to improve reliability.

2. When modifying an Open Order and adding an item to the modified open order, the new item’s discount rule now properly gets set to Manually Entered Price when a price adjustment is made.

3. The House Charge Aging Report now works properly when running the report using "Exclude All Zero Balance Accounts".

4. Import Preview Screen now properly shows the Custom Subtotal fields.

5. Changed Inventory Manager filter button focus so that modification of a Stock Number filter will Add a filter, not Replace.

6. Disabled Replace/Remove/Removal All buttons on Filters when the filter list is empty instead of displaying a warning.

7. Sales Screen Status Bar now properly displays the item’s last cost.

8. Added Label Definitions to synchronization list so that new labels are synchronized across Locations/islands.

9. Added Labels to Export/Import Utilities. This will allow label definitions and statuses (hidden) in the Label List to be exported from one store for import into another.

10. Fixed Copy Discount Rule not working under certain conditions.

Exporting Sales with a Taxable filter, now works properly.

11. Memorized Reports is now properly loading the memorized filters.

12. PO Item with addons no longer forces the PO editor to close when editing items with Addons.

13. Label list now properly sorts alphanumerically with case insensitivity.

15. Miscellaneous improvements to sales screen Addon functionality.

16. When entering items onto the Sales Screen with Quan Space SKU, that are a part of discount rules that allow item consolidation, the items are now properly consolidated.

New Feature Previews

1. Label Designer (Preview). You can now turn on the ability to create your own label sizes and styles. Please contact technical support if you are interested in this feature.

2. Octopus Bridge (Preview). You can now connect RetailEdge to multiple different ecommerce sites (e.g., Big Commerce, Woo Commerce, WIX, Local Express, etc.) and Marketplaces (e.g, Amazon, Ebay, Walmart, etc.) through Octopus Bridge. Please contact technical support if you are interested in this feature.
