Configuring a Customer-Facing Display

POS Software and Setup · https://retailedge.com/docs/new-display-feature

This new Customer Display option offers you a way to enhance your customer's experience in store and provides options that a traditional two line display could not. This display allows you to use a secondary Screen that not only shows sales information to your customers, but allows you to display images and videos and even websites for a truly unique experience at the point of sale. This video goes over how to configure those settings in RetailEdge. If you enjoy this video be sure head over to YouTube and subscribe to our channel for more RetailEdge tutorials!
