RetailEdge 8.2.78 Release Notes

Published November 1, 2022

This release is another major release that includes many suggestions received in response to our email blast asking what do you wish RetailEdge could do. Features marked with **(CS)** is a RetailEdge customer's suggestion.

New Features and Improvements

1. Modified Touch Sales Screen to allow it to scale and to run non-full screen. This allows the touch sales screen to work with wider aspect touchscreens and larger monitors and allows users access to the Toolbar when using the touch screen and will stretch buttons to allow them to be larger and more accessible.
2. **(CS)** Added Enhanced Search to lookups. Search allows for ANY or ALL searching within fields. These options allow to broaden (ANY) or narrow (ALL) your searches.
3. **(CS)**Added new Copy Item to Inventory Manager to allow copying of items in inventory in addition to copying items from Receiving and Purchase Orders.
4. Added New Customer Visits Report.
5. **(CS)** Changed Case List report so that it now indicates case parent name, case qty, item quantity and item qty after break.
6. **(CS)** Added Sales with Manual Discounts report to show sales discounts not from a discount rule.

7. **(CS)** Added images to the touch screen buttons for items that have images.
8. **(CS)** Sales screen now suppresses out of stock warnings on case children that have cases that can be broken.
9. **(CS)** Added margin column to PO Editor Items tab.
10. **(CS)** Added Item Bin and Shelf information to Pick List receipt.
11. Added a Reference Number column to the detailed payment methods report (Sales -> Payment Methods -> Payment Methods (detailed))
12. **(CS)** Added new option to require Check/Reference Number for payment methods on the sales screen.
13. **(CS)** Added new option to display Average and Last Cost on the sales screen bottom status bar.
14. SQL performance enhancements for some reports and grids.
15. Added better error messaging and trapping for sent emails.
16. **(CS)** Added new Warn When No Qty – Confirmation Required. option to the workstation settings. This option will get displayed on the sales screen when items are not available and will prevent adding items to the sales screen until the clerk enters a confirmation.
17. **(CS)** Added CustID filter to Receipt Messages report.
18. Added proactive Log Master and Log Detail table repairs for multi-location customers who host their own data.
19. **(CS)** Added new Available Qty column to Inventory Find screen.
20. **(CS)** Tape Style Closing report now has options to include item summary, department summary, or both.
21. **(CS)** Quantity Edit Report now has an Action Type filter.
22. **(CS)** Added Item Availability Report. The report shows Stock Number, Description, On Hand, Allocated and Available, Cost and Retail.
23. **(CS)** Added Traditional Sales Screen shortcuts to Touch Sales Screen.
24. Added additional messaging to help users prevent item matrix item duplication.
25. Added button to alphabetically sort matrix definitions.
26. Added function to automatically update matrix children with new matrix information when a matrix definition is changed.

27. **(CS)** Added option to Purchase Order Lines to be able to Copy or Move the selected items to another or new Purchase Order.
28. Added ability to limit reporting based on clerk’s security location access.

Squashed Bugs
